HENDERSON'S VEGETABLE SEEDS

The Choice of Progressive Market Growers

All of the varieties listed in this catalog were bred and selected with one object in mind, and that is to produce profitable crops for the commercial grower. Our offerings include the most desirable types for the long distance shipper, as well as those that appeal primarily to the local market trade. Whether your market is far or near, Henderson's seeds produce the crops that bring good returns.

As some of the stocks of our Famous Strains of Superior Vegetable Seeds for Market Growers are extremely limited this year due to crop shortage, we urge our customers to place orders as early as possible.

Yellows Resistant Varieties

RESISTANT PREMIER (Extra Early)

Henderson's Premier Cabbage has always been popular with growers who want small compact plants for intensive cultivation. Now we have a "yellows" resistant strain that has retained the desirable characterstics of the original type. The plants are small, compact, with few outer leaves. The heads are medium small, round and although a few days later than the non-resistant strain, mature with exceptional uniformity. Season 64 days.

	oz.	¼ lb.	lb.
Price	85c	$2.50	$7.50

RESISTANT GOLDEN ACRE (Extra Early)

This strain has proven highly resistant to "yellows" and has made it possible for growers to produce a good crop of early Cabbage in many areas infested with this disease. The heads closely resemble our strain of regular Golden Acre, but mature a day or two later. Season 64 days.

	oz.	¼ lb.	lb.
Price	85c	$2.50	$7.50

RESISTANT COPENHAGEN MARKET

This "yellows" resistant strain matures later than our ordinary Copenhagen Market and the heads are somewhat larger. Where "yellows" is prevalent, growers may depend on this variety to produce an early crop of excellent round heads. Season 75 days.

	oz.	¼ lb.	lb.
Price	85c	$2.50	$7.50

MARION MARKET (Second Early)

A "yellows" resistant type of Cophenagen Market and one of the first resistant strains to be developed. Marion Market has proven very profitable for many growers because of its dependability and heavy yields even on yellows infected soil. The plants and heads are larger than Standard Copenhagen Market and require about 10 days longer to mature. The heads are round, very solid and excellent for shipping. Season 75 days.

	oz.	¼ lb.	lb.
Price	75c	$2.00	$6.00

BUGNER WINTER (Late)

A late "yellows" resistant variety that is popular in many localities. The plants are hardy and vigorous. The heads are large, slightly flattened in shape and are ready for cutting a few days earlier than Wisconsin Hollander. Season 100 days.

	oz.	¼ lb.	lb.
Price	$1.20	$3.50	$10.50

WISCONSIN HOLLANDER NO. 8 (Late)

This is a "yellows" resistant strain of the Danish Ballhead type. An excellent late variety for storage and shipping. The plants are large and very hardy. The heads are large, practically round and solid. Season 105 days.

	oz.	¼ lb.	lb.
Price	85c	$2.50	$7.50

Extra Early Standard Varieties

CHARLESTON WAKEFIELD—Henderson's LONG ISLAND GROWN SEED

This special strain of Charleston Wakefield has been grown on Long Island since 1883 when we produced a special crop from plants selected by Mr. Towles of Martins Point, S. C. The heads are pointed, about twice as large as Early Jersey Wakefield and are ready for cutting about a week later. This strain is exceptionally resistant to freezing temperature, and for this reason is extensively used by Southern growers for fall planting, being harvested the following spring. Season 68 days.

	oz.	¼ lb.	lb.
Price	50c	$1.50	$4.00

COPENHAGEN MARKET. It is equally well adapted to local market and shipment. The heads are round, solid, weighing 3½ to 4½ pounds, and in maturity are nearly a week later than our strain of Golden Acre. Season 69 days.

	oz.	¼ lb.	lb.
Price	75c	$2.00	$6.00

CABBAGE

SEASONS INDICATED ARE APPROXIMATE FROM THE SETTING OUT OF THE PLANTS

Extra Early Standard Varieties

EARLY JERSEY WAKEFIELD

An extra early variety. Plants small and compact, allowing close planting. The heads are conical in shape and very firm. Good shipper. Season 62 days.

	oz.	¼ lb.	lb.
Price	50c	$1.50	$4.50

EARLY MARKET. An early round headed variety only a few days later than Early Jersey Wakefield. The plant is small, short stem, few outer leaves. Heads round, very uniform in shape. Splendid market variety. Season 64 days.

	oz.	¼ lb.	lb.
Price	75c	$2.00	$6.00

GOLDEN ACRE. An early selection from Copenhagen Market, and matures about seven days earlier. Head very solid and slightly smaller than Copenhagen Market. Plants dwarf, compact, with few outer leaves. Our stock of Golden Acre is specially selected, and we highly recommend it. Season 64 days.

	oz.	¼ lb.	lb.
Price	75c	$2.00	$6.00

ROUND HEAD No. 18. This variety is being grown in the Charleston, S. C., district in place of Charleston Wakefield. The plants are small and compact; stem short; head almost ball-shaped, 7 to 8 inches in diameter, weight, 3 to 4 pounds. Season same as Charleston Wakefield. Season 68 days.

	oz.	¼ lb.	lb.
Price	75c	$2.00	$6.00

GREEN ACRE. (New). This new variety is best described as a Green Golden Acre. The plants are very uniform, compact, and have few outer leaves. The heads are slightly larger than Golden Acre and require a few days longer to mature. The outstanding feature of Green Acre is the green color of the leaves, especially the inner leaves which make up the head. This characteristic is very desirable because the green color gives the heads a very fresh appearance when they reach market even after shipment to distant markets. Season 70 days.

	oz.	¼ lb.	lb.
Price	$1.00	$3.00	$9.00

HENDERSON'S PREMIER. We recommend this variety for the market gardener desiring an extra early round-headed cabbage. In our Cabbage trials over a period of several years, Premier has proven to be 4 or 5 days earlier than Golden Acre. Other comparative trials throughout the country have confirmed our trials and Premier has been given Number 1 rating for earliness, uniformity of plant, size of head and maturity. Plant small and compact, which permits very close setting. Head medium small in size, weighing approximately 3 pounds, very solid and of high quality. Season 60 days.

	oz.	¼ lb.	lb.
Price	80c	$2.25	$6.75

Second Early Varieties

ALL SEASONS. An old standard variety and well adapted for general purposes. The plants are remarkably vigorous in hot weather, and for this reason is a very desirable variety for use in warm climates. The heads are large, flat, solid, often weighing 9 to 10 pounds. Season 87 days.

	oz.	¼ lb.	lb.
Price	65c	$1.95	$5.85

GLORY OF ENKHUIZEN. This variety can be described as a large, late Copenhagen type. The heads are larger and from a week to ten days later in maturing. Especially desirable for market gardeners requiring a fairly large, round headed variety. Also extensively used for sauerkraut. Season 76 days.

	oz.	¼ lb.	lb.
Price	65c	$1.95	$5.85

Henderson's Famous Snowball

CAULIFLOWER

SEASONS INDICATED ARE APPROXIMATE FROM THE SETTING OUT OF THE PLANTS

We have always controlled Henderson's Snowball and Primosnow Cauliflower, any statement to the contrary notwithstanding, and unless the seed is bought directly from us, you do not get the genuine, as we do not supply dealers. Sold only in sealed packets.

HENDERSON'S SNOWBALL

Excellent for Forcing—Dependable for Spring Crop—Unsurpassed for Fall Planting.

Market Growers the world over have used this strain year in and year out since it was first offered many years ago. We are continually receiving letters testifying to the dependability and general excellence of Henderson's Snowball. The widespread demand for this strain clearly indicates that it is adapted to the widest range of soil and climatic conditions of any variety of Cauliflower in existence.

The plants are of medium height, sturdy and vigorous. The outer leaves are of upright growth, while the inner ones fold over in such a way that the "flowers" are completely protected until they have reached a good size. The heads are uniformly large, deep, very solid, snow white, and under normal growing conditions are entirely free from leafiness. Attractiveness and quality are unequalled. Season 65 days.

Price	$2.25	$4.00	$14.00	$45.00

HENDERSON'S PRIMOSNOW

This outstanding extra early variety was introduced by us and is now recognized as the leading first early variety. The heads or "flowers" possess many of the characteristics of our famous Snowball—good form, good size, great depth, and a beautiful snow-white color, free from riciness or leafiness. The plant is sturdy; the foliage of fine form; the inner leaves being incurved give ample protection to the developing "flower". Primosnow is the earliest high quality Cauliflower that has ever been developed. It is ready to cut fully 8 to 10 days before such strains as Snowball or Erfurt and is of such uniform maturity, that practically the entire crop may be cut at one time. Highly recommended for market growers and shippers. Season 55 days.

IMPROVED HOLLAND ERFURT

HENDERSON'S IS FAMED FOR QUALITY

With no other vegetable is it more important to obtain dependable strains of high quality seeds than with Cauliflower.

SUPER SNOWBALL

This is an extra early strain of the Snowball type. Besides being extra early, the heads or "flowers" mature with greater uniformity, making it possible to harvest a large percentage of the crop in the first cutting.

The plants are vigorous and strong. The leaves, especially the inner ones, are well folded or curled over the heads. The heads are large, uniform in size, deep, and solid. They mature early and many times the entire crop is harvested before any heads of the later types are ready. One of the most profitable varieties for market. Season 55 days.

	½ oz.	oz.	¼ lb.	lb.
Price	$2.75	$5.00	$18.00	$54.00

EARLY SNOWHITE (SPECIAL NO. 25). We are pleased to offer this new outstanding early variety. It has shown up well in our Cauliflower trials, and the commercial growers who have tried out this new type, are very enthusiastic about its merits. The plants are sturdy and somewhat taller growing than Primosnow. The inner leaves fold over the heads and overlap each other in such a way that added protection is given to the "flowers" until they are well developed. Even the outer leaves which are straight and upright, are inclined to curve inward at the tip.

The heads are large, of a uniform size, very deep, solid, exceptionally heavy, pure white, and of the highest quality. The well formed tight curd gives the heads a most attractive appearance. In season EARLY SNOWHITE is a few days later than Primosnow, but practically as uniform in maturity. Season 59 days.

Henderson's Famous New York and Imperial Types

NEW YORK

We introduced this noted variety many years ago. It has been extensively grown in all sections of the country, and although not as popular today since the introduction of the earlier New York types, is still used in large quantities in many localities. The plants are large, with dark green outer leaves, which are slightly curled on the edges. The heads are large, very solid, well blanched, crisp, sweet, and are slow to run to seed. Our strain is noted for its uniformity and large sized heads. Season 80 days.

	oz.	¼ lb.	lb.
Price	35c	$1.15	$3.40

NEW YORK NO. 12

This is an earlier selection from Henderson's New York. It is very sure heading and better adapted to warm weather than the original type. The plants are compact with few outer leaves, and head with great uniformity. The heads are slightly flattened, solid, and of a large even size. The most dependable of the New York types, especially under varied growing conditions. Season 80 days.

	oz.	¼ lb.	lb.
Price	35c	$1.15	$3.40

NEW YORK NO. 515

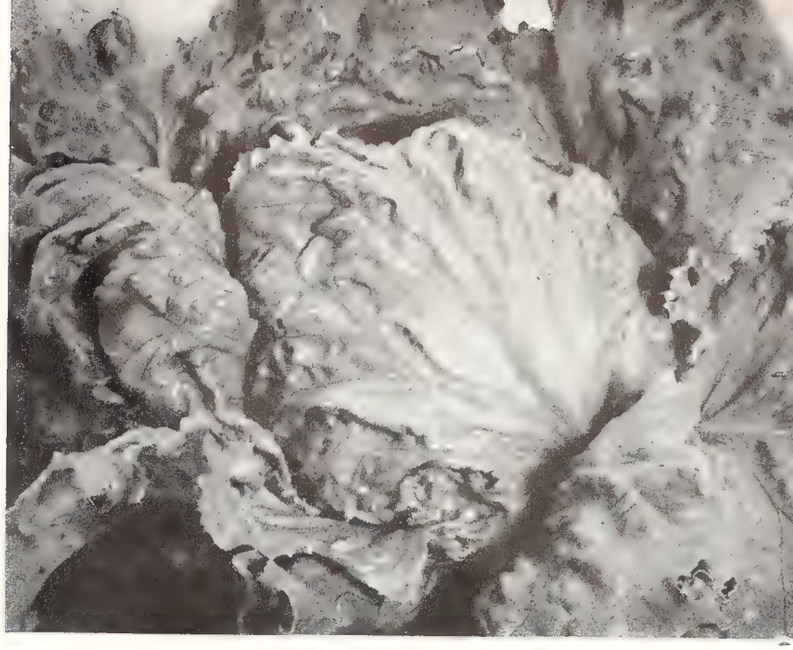
An early type of New York which in appearance resembles New York No. 12, but is brighter green in color. The heads are well formed, solid and very attractive. It is also dependable in heading and well adapted to a wide range of soil and growing conditions. Highly recommended. Season 80 days.

	oz.	¼ lb.	lb.
Price	35c	$1.15	$3.40

IMPERIAL NO. 44

This new Iceberg type was developed by Dr. I. C. Jagger of the U. S. Department of Agriculture. During 1936 and 1937 successful test plantings of Imperial No. 44 were made in lettuce growing muck districts of the East. It is now an established variety for muck sections. Although not extensively tried on upland soils, we believe it will be suitable there as well. Imperial No. 44 produces large, hard, well formed heads, uniform in size. In comparative test plantings, it has produced a good percentage of hard heads when nearby plantings of commercial strains proved worthless. Season 82 days.

	oz.	¼ lb.	lb.
Price	40c	$1.25	$4.00



Imperial No. 847

IMPERIAL NO. 847

This new black seeded New York type has proven very satisfactory in many sections of the East. It is particularly well suited to upland soil. We have seen several commercial plantings that were so even in maturity that the entire crop was ready for cutting at one time. Plants medium large, with bright green leaves. Heads round, large, solid, crisp and of good quality. Season 83 days.

	oz.	¼ lb.	lb.
Price	40c	$1.25	$4.00

GREAT LAKES

This new variety was developed by the U. S. Department of Agriculture and Michigan State College Experiment Station. It is a crisphead or Iceberg type, and in many respects similar to Imperial No. 456.

During the season of 1943, Great Lakes was tested out in trial plantings in many sections, and in these trials the variety was outstanding. It has also been tested in a few commercial plantings with equally good results.

Like Imperial No. 456, Great Lakes stands heat well, is slow to produce seed stalks, and to date has proven to be very resistant to tip burn. The heads are medium large, exceptionally solid, and of fine quality. Season 80 days.

	oz.	¼ lb.	lb.
Price	80c	$2.40	$6.50

IMPERIAL NO. 456

This new Iceberg type has been used the past few years in the muck sections of upper New York State with excellent results. The variety during this period has proven to be much better suited to midsummer growing conditions than Imperial No. 44, which up to the present time has been the best of the Iceberg types for muck sections of the East.

Imperial No. 456 withstands summer heat well, and has shown a decided tendency to being resistant to tip-burn. It is also slow to run to seed. In size, the plants and heads are somewhat smaller than Imperial No. 44. In our Lettuce trials last summer this new variety was outstanding. Season 80 days.

	oz.	¼ lb.	lb.
Price	80c	$2.40	$6.50

John Lodaz surveys a field of Great Lakes lettuce grown by him and his father, Steve Lodaz, Hicksville, Long Island. They say, about Great Lakes lettuce:

". . . proved to be the best and most profitable variety of lettuce we have ever grown during our many years of vegetable growing experience . . . it has withstood unfavorable weather conditions very well."

Our Strains of New York and Imperial Lettuce Are the Finest Obtainable.

I am sorry I had left you and kept on ordering from a rival firm because of their cheapness. Their seeds are not true and poor germination, so return to you forever and ever.

St. Lucia, B. W. I.

It costs as much to plant and harvest an inferior crop as one of high quality. It therefore pays to plant seeds of known quality.

AGRICULTURAL SEEDS—GENERAL LIST

Prices Subject to Market Fluctuations.

CLOVERS

CRIMSON or SCARLET (Trifolium Incarnatum). Plowing under a good crop of Scarlet Clover is equivalent to 20 tons of stable manure per acre and even if the Clover be harvested or pastured, the benefits derived from the wonderful nitrogenous root formation will alone many times repay the cost of seed and labor. Crimson Clover cut when coming into bloom makes hay richer in protein than Red Clover, and the yield on average soils is two to three tons per acre. It is especially adopted for green forage and silage and is much relished by dairy stock. Cut green before flowers mature.

Crimson Clover should not be fed after the flowers mature for the hairs of the calyx are apt to form "hair balls" in the stomachs of animals.

Sow at the rate of 15 pounds of seed per acre, either broadcast or drilled. Cover lightly with a harrow. In the latitude of New York City sow from July 15 to September 15, and in the South as late as October. Time of flowering is June; height 2 feet.

WILD WHITE CLOVER. A distinct type, dwarf growing and is used extensively in English lawns with success. The blossoms are few and are not so prominent. The seed we offer is Kent type, grown in New Zealand. The plant is creeping in habit and thrives best during the summer drought months; should be kept under mower during the season. 1 lb. will seed a large area and should be mixed with lawn grass seed or dry sand to get it evenly distributed. For pasture, helps the grasses by adding nitrogen to the soil, thrives on all soils and is relished by cattle.

ASTERS

The Improved Strains of China Asters, the showiest and most useful of our Summer Cut Flower Annuals, are now staging a remarkable comeback with the development of the wilt resistant strains.

WILT RESISTANT STRAINS

Through the use of wilt resistant seed, success may be had where the soil is infected with wilt fungus, where it has been impossible to grow perfect flowering plants. It is not claimed, however, to be immune from Aster "yellows" and other Aster diseases or insect pests.

The flowers are the most beautiful formed of all large Asters. When well grown the flowers of Henderson's Invincible Asters average 3½ inches across; 4-inch flowers are quite common, if grown especially for cut flowers and the side branches pruned, allowing a plant to carry not over 8 or 10 flowers, one flower to a stem.

STOCKS DOUBLE GIANT (See Back Cover)
(Column Gardenia)

3748 Stock Gardenia. As lovely and elegant as the exotic Gardenia from which it borrows its name, this new Stock is the crowning achievement of the plant breeder's efforts. With superbly formed magnificent spikes composed of individual florets 2 to 2¼ inches in diameter, this remarkable new Giant Column Stock is indeed the last word in perfection for its class. Shimmering, glistening white, the flowers are the purest snow white of any Stock variety yet introduced. Producing only one flower spike to a plant, this spike will, however, be of enormous size, 12 to 15 inches of florets and nearly 3 feet in length, and 4 or even 4½ inches in depth, with individual florets closely and compactly placed on the stem. The robust habit and uniformity of type combined with a high percentage of doubles places Gardenia definitely in a class by itself with no peer among the finer flowers for high class florist trade.

A WONDERFUL SCIENTIFIC DISCOVERY NOW MADE AVAILABLE TO ALL GARDENERS IN THE JAPANESE BEETLE ZONE

JAPIDEMIC (Milky Disease Spore Dust)

Nature's Control Medium Which Destroys the Beetle Grub.

Japidemic contains the **living spores of the bacterium (Bacillus popilliae)** which causes the milky disease of Japanese Beetle grubs. After years of study of a number of disease causing organisms by the Bureau of Entomology of the United States Department of Agriculture, it was found that the bacteria of the milky disease is the most effective, as it multiplies rapidly in the beetle grub and soon causes its death. **Japidemic** is distributed on top of the ground or on turf in grub infested areas. It is not to be used as a spray, as it has no direct effect upon the adult beetle. One treatment under favorable conditions will permit the rapid spread of the disease, and destroy the grubs within the area. The bacteria remains alive for a long period, and is ready to infect and kill successive broods of Japanese beetle grubs as they move about in the soil, feeding on plant roots.

Japidemic is harmless to grass and other plant life, and has no ill effects on human beings or warm blooded animals. JAPIDEMIC is a biological product requiring exacting laboratory equipment, which of necessity limits the quantity in which it can be produced. One pound will treat approximately 4,000 square feet.

Price per pound $5.00 postpaid.

Sow The "Henderson" Lawn Grass Seed

and Obtain a Grassy Carpet of Unrivalled Emerald Green

IN FOUR WEEKS FROM SOWING IT IS READY FOR MOWING

Henderson's celebrated Lawn Grass Seed Mixture has been thoroughly tested by a country-wide use during three-quarters of a century. It is the fruit of years of our personal experience and study, coupled with that of many of America's foremost gardeners, who steadfastly maintain and unite with us in saying that it has no superior for American conditions and the American climate. The rapidity with which it will form a deep green velvety turf, has been the delight of gardeners since its introduction, for, under ordinary conditions, the bare soil will be clothed with an emerald carpet of living green in four weeks' time.

PRICE OF "HENDERSON" LAWN SEED

	5 lbs.	10 lbs.	25 lbs.	50 lbs.	100 lbs.
Price	$3.85	$7.50	$17.50	$32.50	$60.00

STANDARD LAWN SEED

This is a blend that is far superior to the low priced lawn seed usually offered. It should be of special interest to florists and contractors for use on development projects. Although this seed is not recommended for a permanent lawn, like the Henderson blend, it does not, on the contrary, give a flash-in-the-pan, but produces a fine durable turf. Sow at the rate of 1 pound to 200 square feet.

	10 lbs.	25 lbs.	50 lbs.	100 lbs.
Price	$5.50	$12.50	$24.00	$45.00

SHADY NOOK

The Ideal Mixture for Shaded Areas

On nearly all lawns there are unsightly bare spots under the shade of trees, which have baffled all efforts to get into Grass, but with this mixture there need be no further difficulty. It is a combination of fine, dwarf growing, evergreen varieties, which in their wild or natural state are to be found growing in the woods or other sheltered and shaded spots. Ground that has been densely shaded by trees is frequently "sour," and if the drainage is defective it is apt to be covered with moss and coarse Grasses. In such cases an application of slaked lime, at the rate of one hundred pounds to each thousand square feet, or two tons to the acre, is an excellent corrective and sweetener, but the moss should be first raked off.

PRICE OF SHADY NOOK

	5 lbs.	10 lbs.	25 lbs.	50 lbs.	100 lbs
Price	$4.50	$8.50	$20.00	$38.50	$75.00

SPECIAL "BENT FORMULA"

A combination of the finest recleaned Grasses, using as a basis for this mixture the imported and domestic Bent Grasses which are so largely used in the finer Putting Greens of today.

A lawn seeded with this mixture and properly cared for will in truth make every lawn a Putting Green. On a lawn of this type, Clock Golf and other lawn games may be enjoyably played.

It is imperative in maintaining a lawn of this type, that the grass should be kept cut short and well rolled all through the season. Starvation of the grass plants is most frequent cause of unsatisfactory lawns, and grass needs constant small applications of fertilizer and plenty of water to maintain a perfect lawn.

	5 lbs.	10 lbs.	25 lbs.	50 lbs.	100 lbs.
Price	$6.00	$11.25	$27.50	$53.00	$100.00

TOUGH TURF

The turf required for outdoor sports must be closely interwoven, firm, elastic, smooth, and durable to stand the wear and tear. These requirements are met in this mixture, which is composed of fibrous, deep-rooting Grasses that spread and intermingle. The seeds are blended in the proper proportions to form and maintain a tough matted sward, constantly green, even in dry weather.

	5 lbs.	10 lbs.	25 lbs.	50 lbs.	100 lbs
Price	$3.85	$7.50	$17.50	$32.50	$60.00

TERRACE SOD

This is a special mixture of Grasses best suited for sowing on terraces, embankments and hillsides; Grasses that produce long, strong, spreading roots, thus preventing heavy rains from washing them out; that will withstand drought, thrive on shallow soils, and at the same time produce a rich, velvety-green turf throughout the season.

	5 lbs.	10 lbs.	25 lbs.	50 lbs.	100 lbs.
Price	$4.50	$8.50	$20.00	$38.50	$75.00

SEASIDE

Our "Seaside" mixture will make a good turf of green on sand where the finer Grasses will not thrive. Of course, the sand must be top-dressed with not less than 2 inches of soil before even our "Seaside" Grass Seed is sown, to enable the young Grass to get a start, after which the long roots—peculiar to the varieties we used in this mixture—drive down deeply in the sand and remain permanently self-sustaining, if attention is given to sprinkling during dry weather.

	5 lbs.	10 lbs.	25 lbs.	50 lbs.	100 lbs
